

Cancer Journeys for Minority Women

Alexis Hegarty and Ella Smith

CAL POLY

Stress & Anxiety - Social Determinant Questionnaire

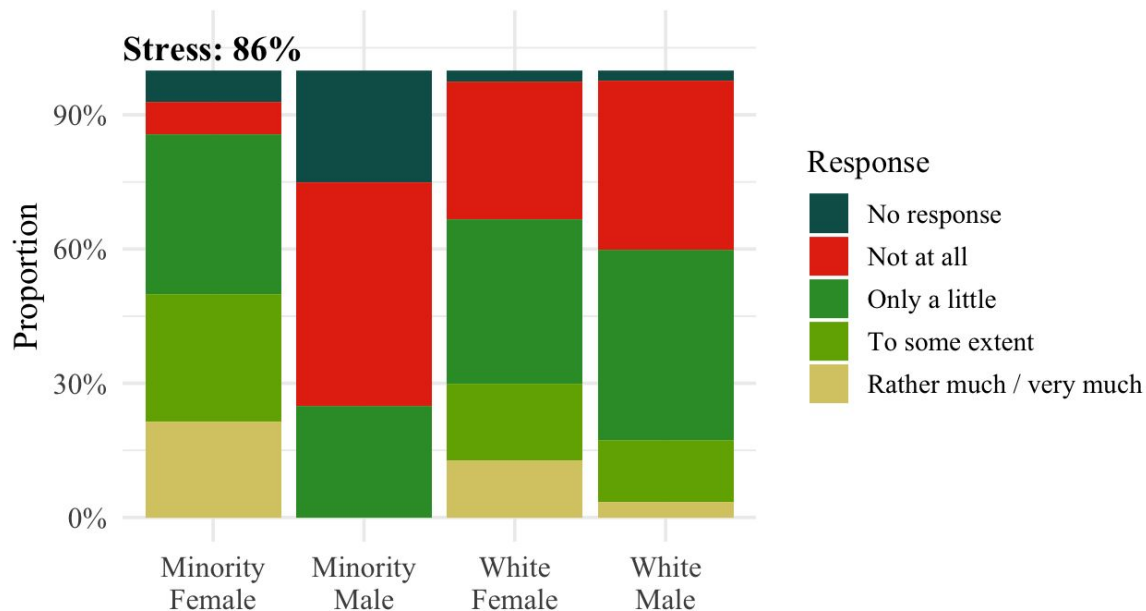

Up to 60–70% of cancer patients report significant anxiety related to uncertainty during treatment.”

-Department of Medical Oncology, Hospital Universitario

About 40% of patients feel they did not receive enough information about what to expect during treatment. - The Pharmaceutical Journal

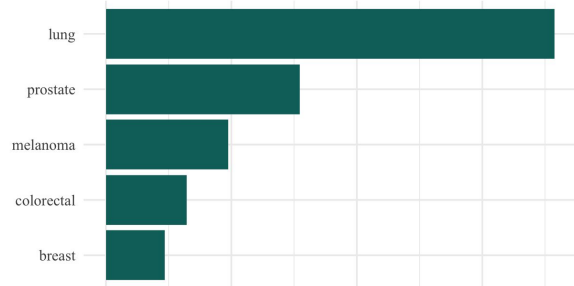

“Black women with breast cancer experience a 40% higher mortality rate compared to white women this disparity may be influenced by suboptimal patient-provider communication... Evidence has suggested that Black patients with breast cancer have unique informational needs, yet few studies focus on... in this community.” - Diana C Litsas Temple University
